

DIGITAL MARKETING

Mrs. Akshatha P R

Department of Computer Applications

Introduction to Marketing vs. Digital Marketing

Marketing is the operational process of identifying, creating, communicating, and delivering value to target consumers.

The traditional **4 Ps of marketing**—**Product, Price, Place, and Promotion**—form the core framework of the traditional marketing mix.

These foundational pillars guide how a brand brings products to market and engages its customer base.

- **Product:** The physical good or service created to solve a specific market problem or customer need.
- **Price:** The monetary model, pricing strategy, and perceived value set for consumers.
- **Place:** The offline or online distribution channels used to deliver the product to buyers.
- **Promotion:** The strategic advertising and promotional messaging used to build audience awareness.

- Traditional marketing is any promotional strategy or advertising method that uses offline media to reach a target audience.
- It relies on tangible materials and conventional broadcasting channels that predate the internet, such as print ads, billboards, television commercials, and direct mail, to build brand awareness
- The traditional 4 Ps of marketing—**Product, Price, Place, and Promotion**—are the foundational elements of a marketing mix used to bring a product or service to market.

- **Broadcast Media:** Television commercials and radio spots aimed at capturing regional mass audiences.
- **Print Media:** Advertisements placed in daily newspapers, monthly magazines, and physical trade journals.
- **Outdoor Advertising:** Highway billboards, transit shelter ads, and physical poster displays.

Key features of Traditional marketing

Offline Channels: Relies completely on non-digital, physical, and broadcast media like television, radio, print (newspapers, magazines), billboards, and direct mail.

One-Way Communication: Information flows unilaterally from the brand to the consumer, offering limited or no immediate interaction or real-time feedback.

Broad Target Reach: Designed to capture a mass audience within specific geographic regions rather than hyper-personalised demographic niches.

Physical & Tangible Assets: Utilises physical materials (brochures, flyers, print ads, physical displays) that consumers can touch and retain.

-
- **High Credibility:** Consumers inherently trust traditional print and broadcast ads.
 - **Long-Lasting Impact:** Physical materials like brochures are kept and reread.
 - **Mass Audience Reach:** A single ad can reach millions of people instantly.
 - **Offline Connectivity:** Effectively reaches demographics that do not use smartphones.

- **Hard to Measure:** Tracking exact return on investment (ROI) is difficult.
- **One-Way Interaction:** Consumers cannot interact or respond directly to ads.
- **Broad Targeting:** Ads often reach people outside the target demographic.
- **High Costs:** Production and ad space fees are often very expensive

- **Internet-Based Advertising:** Promotional strategies executed entirely through **online channels, websites, and connected digital electronic devices.**
- **Data-Driven Targeting:** Campaigns tailored to specific user segments based on **real-time behaviour, demographics, and individual consumer interests.**
- **Measurable Performance:** Tracking software provides instant analytics to monitor engagement, conversion rates, and **exact return on investment.**

Key features of digital marketing

- **Hyper-Targeted Auditing:** Pinpoints specific users based on explicit behaviours, demographics, interests, and past search history.
- **Two-Way Interaction:** Facilitates direct, immediate conversations between brands and consumers via comments, chats, and social media.
- **Global and Local Reach:** Scales effortlessly from targeting a 5-mile local radius to launching worldwide campaigns simultaneously.
- **Highly Modifiable Content:** Enables marketers to edit text, swap images, or pause underperforming ads mid-campaign.

- **Cost-Effective:** Low entry costs allow small budgets to launch successful campaigns.
- **Instant Analytics:** Software tracks conversions, clicks, and exact ROI in real time.
- **Easy Optimisation:** Marketers can edit, test, or pause live campaigns instantly.
- **Direct Engagement:** Two-way communication builds loyal, interactive customer communities.

-
- **Tech Dependency:** Requires constant adaptation to fast-changing platform algorithms.
 - **Ad Fatigue:** Consumers frequently ignore digital ads or use ad-blocker software.
 - **Security Risks:** Brands face constant exposure to data breaches and negative public comments.
 - **Skill Gap:** Demands specialised technical expertise to manage complex data tools.

Traditional marketing versus Digital marketing framework differences

Traditional marketing versus Digital marketing framework

differences

Feature	Traditional marketing	Digital marketing
Audience Targeting	Mass Appeal: Reaches broad, generic demographics within a geographic area.	Hyper-Specific: Targets exact individuals based on behaviors, interests, and history.
Measurement & ROI	Delayed & Estimated: Uses rough estimates and surveys to calculate campaign success.	Instant & Precise: Tracks exact clicks, views, sales, and costs in real time.
Communication Flow	One-Way: Broadcasts a static message directly to a passive, listening audience.	Two-Way: Enables instant interaction, comments, reviews, and messaging.
Cost & Flexibility	Expensive & Rigid: Requires high upfront costs and materials cannot be edited once live.	Affordable & Modifiable: Allows micro-budgets and instant content updates mid-campaign.

The rapid growth of the internet, smartphones, and social media has changed the way businesses communicate with customers. Traditional marketing is still useful, but it often lacks precise targeting and measurable results.

Reasons for the Shift

- Growth in internet users worldwide
- Increased use of smartphones
- Rise of e-commerce platforms
- Demand for personalised customer experiences
- Availability of real-time campaign analytics
- Lower advertising costs compared to traditional media
- Easier customer engagement through social media

Timeline of Digital Marketing Evolution

The Early Web Era (1990s): Web 1.0 & Static Outreach

- The First Clickable Ads: In 1994, the first banner ad appeared on HotWired, giving birth to digital display advertising.

The Search & Social Revolution (2000s): Web 2.0 & Interactive Engagement

- Paid Search & Targeted SEO: The launch of Google AdWords (2000) transformed paid acquisition through PPC (Pay-Per-Click), while search engine optimisation (SEO) shifted from basic keyword placement to content-centric indexing.

The Data & Automation Era (2010s): Personalisation & Customer Journeys

The Intelligent Era (2020s–Present): AI, Privacy, & Hyper-Personalisation

Shift 1 — SEO to GEO

- **The Old Way (SEO):**
 - Trying to trick Google's robot to put your link on a page of results.
 - Focused on keyword stuffing and formatting.
- **The New Way (GEO - Generative Engine Optimisation):**
- Writing clear, highly accurate, and expert answers.
- Ensuring AI assistants pick your brand as the singular best answer when a user asks a question.

Search Engine Optimisation (SEO)

SEO improves the ranking of web pages in search engine results using keywords, quality content, backlinks, and technical optimisation.

Characteristics

- Organic traffic
- Keyword optimisation
- Link building
- Website optimisation

Generative Engine Optimisation (GEO)

GEO focuses on creating reliable, accurate, and structured content that AI systems such as ChatGPT and Google AI Overviews can use when generating answers.

Characteristics

- AI-friendly content
- Expert information
- Structured answers
- High credibility
- Conversational writing

Shift 2 — AI Spam to Human Touch

- **The Old Way (Automated Scale):**

Pressing a button to lazily spam the internet with hundreds of cheap, AI-generated blog posts.

Result: Customers are bored and experience instant content fatigue.

- **The New Way (Human-Led Elevation):**

- Using AI behind the scenes for boring admin work so humans have time to create real art.
- Showing real expert faces, true brand stories, and authentic videos that robots cannot fake.

Importance of human centred marketing

Best Practices

- Tell genuine brand stories.
- Use real customer testimonials.
- Create educational content.
- Focus on solving customer problems.
- Build trust through transparency.
- Combine AI efficiency with human creativity.

Example

A restaurant sharing videos of chefs preparing food attracts more engagement than publishing hundreds of AI-written blogs.

Shift 3 — Stalking to Fair Trade

- **The Old Way (Privacy Intrusion):**

- Tracking people invisibly without asking permission.
- Why it's dead: Cookies are blocked by modern browsers and strict privacy laws.

- **The New Way (Value-Exchange Model):**

- Offering a fair, transparent trade to the customer.
- Giving them immediate value (like a free calculator, interactive quiz, or helpful tool) in exchange for their contact info.

- **The Value Offer:** Providing useful tools such as free interactive calculators, customised quizzes, or downloadable guides.
- **The Customer Consent:** Consumers willingly share their email or contact details because they receive direct utility.
- **Strategic Outcome:** Builds an owned database of high-intent first-party and zero-party customer leads ethically

Key metrics and digital channels overview

The 5 Core Digital Channels:

1. **Organic Search (SEO):** Winning **free traffic** on Google by answering user questions.
2. **Paid Advertising:** **Paying for immediate visibility** at the top of search pages or websites.
3. **Social Media:** Building brand personality and community (via free organic posts or targeted paid ads).
4. **Email Marketing:** Nurturing relationships and driving **repeat sales** from an audience we own.
5. **Content & Video:** Creating helpful videos, blogs, or visuals that build trust and authority.

Search engine marketing(SEO vs Paid)

Organic Search (SEO):

- **Goal:** High search engine rankings via query relevance.
- **Pros:** Free long-term traffic, higher user trust, compounding value.
- **Cons:** Takes months to show results; relies on search algorithm updates.

Paid Advertising (PPC):

- **Goal:** Instant top-of-page visibility.
- **Pros:** Immediate targeted traffic, granular demographic/keyword targeting.
- **Cons:** Traffic stops the moment the ad spend stops; requires ongoing budget.

Organic Social Media:

- Focuses on building brand personality, trust, and community.
- Platforms: LinkedIn (B2B), Instagram/TikTok (Visual B2C), Twitter/X (Real-time).

Paid Social Advertising:

- Leverages user interest data to push targeted ad creatives directly into feeds.

Community Engagement:

- Driving user-generated content (UGC), active comments, and viral shares.

Why Email is Unique:

- It represents an **audience we own**—free from algorithm changes or ad cost inflation.

Primary Functions:

- **Nurturing:** Building direct 1-on-1 relationships over time.
- **Retention:** Driving repeat purchases and reducing customer churn.

Best Practices:

- Consent-based list building (permission marketing), segmentation, and personalisation.

The Power of Helpful Content:

- Creating blogs, videos, podcasts, and infographics that solve consumer problems.

Authority & Trust:

- Establishes the brand as an industry thought leader before selling.

Video Formats:

- **Short-Form (Reels/Shorts):** High discovery and fast engagement.
- **Long-Form (YouTube/Webinars):** Deep consideration and high trust building.

Feature	B2B (Business-to-Business)	B2C (Business-to-Consumer)
Primary Channels	SEO, Email, LinkedIn, Whitepapers	Social Media, Meta Ads, Video, Email
Buyer Motivation	ROI, Efficiency, Logic	Emotion, Lifestyle, Instant Need
Sales Cycle	Long & Multi-touch	Short to Impulse
Key Focus	Lead Nurturing & Educational Content	Visual Engagement & Instant Conversion

Why We Measure:

- Digital marketing allows real-time tracking, unlike traditional print or TV ads.

Avoiding Vanity Metrics:

- Likes and impressions look good, but business health relies on sales and profit.

Two Categories of Key Metrics:

- **1. The Money Metrics:** Measuring business health and profitability.
- **2. The Action Metrics:** Measuring customer behaviour and engagement.

Key metrics and digital channels overview

Key Metrics of Digital Marketing:

1. The Money Metrics (Business Health)

Are our marketing investments actually profitable?

- **Cost to Get a Customer (CAC):** The total marketing spend needed to win one new paying customer.
- **Customer Value Over Time (LTV):** The total amount of money a customer spends with us throughout their relationship.

Golden Rule for Slides: We want the value of a customer (LTV) to be at least 3x higher than the cost to get them (CAC).

- **Return on Ad Spend (ROAS):** The revenue generated for every dollar spent on direct advertising.

Key Metrics of Digital Marketing:

2.The Action Metrics (Customer Behaviour)

Are our campaigns engaging the right people?

- Click-Through Rate (CTR): The % of people who saw our link and actually clicked it. (High CTR = Great messaging)
- Conversion Rate (CVR): The % of website visitors who took action (bought a product, filled a form, etc.). (High CVR = Great website experience)
- Cost Per Lead (CPL): How much it costs to get one interested person's contact details.
- Engagement Rate: How actively people like, comment on, and share our social media content.

Understanding the Digital Consumer

The Shift in Consumer Power:

- Modern consumers have endless information at their fingertips and can scroll past ads instantly.

Key Consumer Expectations:

- **Speed:** Instant page loads and fast answers.
- **Relevance:** Personalised recommendations based on intent.
- **Authenticity:** Trusting peer reviews over corporate promises.

Consumer journey- AIDA(Awareness and Interest)

- **Awareness :** Capturing immediate focus in a crowded feed by using high-contrast visuals, bold headline hooks, or relatable problem statements within the first 3 seconds to stop the user from scrolling past.
- **Interest:**— Deepening curiosity by explaining how the product solves the consumer's specific problem, shifting their focus from broad brand recognition to understanding the practical value and benefits it provides.

Awareness:

- **Goal:** Capturing immediate focus in a crowded feed.
- **Execution:** High-contrast visuals, bold headline hooks, or relatable problem statements within the first 3 seconds to stop the user from scrolling past.

Interest:

- **Goal:** Deepening curiosity.
- **Execution:** Explaining how the product solves the consumer's specific problem, shifting their focus from broad brand recognition to understanding practical value and benefits.

- **Desire:** The shift from "**This is interesting**" to "**I want this.**" This is driven by emotion and validation—reading reviews, seeing before-and-after photos, or comparing features.
- **Action:** The ultimate goal. They add to the cart, fill out a lead form, or hit the "**Buy Now**" button.

Desire:

- **Goal:** The shift from "This is interesting" to "I want this".
- **Execution:** Driven by emotion and validation—reading reviews, seeing before-and-after photos, or comparing features.

Action:

- **Goal:** The ultimate conversion goal.
- **Execution:** User adds to cart, fills out a lead form, or hits the "Buy Now" button.

The Marketing Funnel: The Operational Blueprint

- While AIDA describes the consumer mindset, the Funnel describes the business process and content needed to guide them.

The 3 Tiers:

- **TOFU (Top of Funnel):** Awareness.
- **MOFU (Middle of Funnel):** Consideration & Evaluation.
- **BOFU (Bottom of Funnel):** Conversion.

TOFU (Top of Funnel) — Awareness

- **Goal:** Reach as many relevant people as possible.
- **Digital Tactics:** Blog posts, educational YouTube videos, social media infographics, SEO (Search Engine Optimisation).
- **Consumer Mindset:** I have a problem, let me look up solutions.

MOFU (Middle of Funnel) — Consideration & Evaluation

- **Goal:** Nurture the leads you captured in TOFU and prove you're the best option.
- **Digital Tactics:** E-books, webinars, email newsletters, case studies, product comparison pages.
- **Consumer Mindset:** "I know my options. Why should I pick you over your competitor?"

BOFU (Bottom of Funnel) — Conversion

- Goal: Eliminate friction and close the sale.
- Digital Tactics: Free trials, discount codes, live demos, clear pricing pages, retargeting ads ("Hey, you left this in your cart!").
- Consumer Mindset: "I'm ready to buy. Is the checkout process smooth and secure?"

The Modern Twist: The digital journey is rarely a straight line anymore. Consumers bounce around

—they might see an ad (TOFU), read reviews for a week (MOFU), leave, get hit by a retargeting ad, and buy (BOFU). We call this messy, non-linear loop the **Modern Consumer Journey**.

Digital Behaviour Analysis

-
- **Tracks Consumer Intent:** Analyses search queries and browsing habits to identify where a user is in the buying journey.
 - **Measures Brand Sentiment:** Evaluates online reviews, mentions, and social chatter to gauge public perception and trust.
 - **Powers Personalisation:** Uses past behaviour and cart history to trigger tailored ads, recommendations, and email sequences.
 - **Optimises Site Performance:** Inspects technical site data and traffic sources to fix user experience (UX) flaws and improve conversion rates.

The POEM Framework:

- A foundational structure classifying every digital marketing touchpoint.

The 3 Media Types:

- Owned Media: Total Control
- Paid Media: Purchased Visibility
- Earned Media: Organic Credibility

Owned Media: Digital assets that your brand completely controls, hosts, and builds from scratch (e.g., your website, blog, or email list).

Key Examples:

- Brand website & blog
- Email subscriber list
- Mobile applications & community forums

Core Benefit: Complete messaging control and permanent data ownership.

Paid Media: Any external channel or audience access that you buy to gain immediate visibility and traffic (e.g., Google Ads, social media sponsored posts).

Key Examples:

- Google Search Ads (PPC)
- Social media sponsored posts (Meta, LinkedIn)
- Display banner ads and paid influencer partnerships

Core Benefit: Rapid scale and instant reach expansion.

Earned Media: Organic word-of-mouth recognition and credibility given to your brand by customers, fans, or the press completely for free (e.g., viral shares, reviews, news coverage).

Key Examples:

- Viral social shares
- Unsolicited online customer reviews
- Press & news coverage

Core Benefit: Unmatched trust and social validation.

- **Pros:** Together, they allow you to instantly scale your reach with Paid, maintain total control over your messaging and data with Owned, and build ultimate customer trust through Earned.
- **Cons:** Balancing them requires significant budget for Paid, a heavy investment of time to build Owned, and navigating the total lack of brand control that comes with Earned.

Digital Marketing Channels

1. Search Marketing (SEO & SEM)

Search is intent-driven. Users are actively looking for information, making this channel incredibly high-converting.

SEO (Search Engine Optimisation - Owned/Earned): Optimising your website's technical structure and content so search engines like Google rank you highly for relevant keywords.

Mechanism: Focuses on "Search Intent" (Informational, Transactional). It requires high-quality content and building backlinks (links from other sites to yours).

SEM (Search Engine Marketing - Paid): Buying text ads at the top of search results (Pay-Per-Click or PPC).

Mechanism: Bidding on specific keywords in real-time auctions. You only pay when a user actually clicks your ad..

2. Social Media Marketing (Organic & Paid)

Social media relies on discovery and community. Users generally aren't looking to buy immediately; they are looking to be entertained or informed.

- **Organic Social (Owned/Earned):** Building a community by posting content on your brand's profiles. It relies on platform algorithms to distribute your content to followers and explore pages.
- **Paid Social (Paid):** Disrupting a user's feed with highly targeted native advertisements.
 - **Mechanism:** Platforms allow you to target users based on granular demographic data, explicit interests, behavioural patterns, and lookalike audiences (people similar to your current buyers).

3.Email Marketing (Owned)

Email is one of the highest-ROI (Return on Investment) channels available because it allows for direct, personalised communication with an audience that has already expressed interest.

- **Mechanism:** Driven by marketing automation. Instead of sending blast emails to everyone, modern email marketing uses segmentation (e.g., sending a specific email only to users who viewed a product three times but didn't buy).
- **Key Types:** Transactional emails (receipts), Nurture sequences (welcome series), and Promotional emails (sales/discounts).

4. Display Advertising (Paid)

Display advertising involves placing visual ads (banners, images, video) across a massive network of third-party websites and publishers.

- **Mechanism:** Unlike search ads which target what someone is typing, display ads target who the person is or where they are browsing.
- **Programmatic Advertising:** The automated buying and selling of online ad space in milliseconds via ad networks (like the Google Display Network).
- **Retargeting:** A highly effective subset of display. Placing a tracking pixel on your site to serve banner ads across the web specifically to people who left your site without buying.

5. Mobile Marketing (Paid/Owned)

Mobile is not just a channel, it is an environment. It prioritises location-based context and immediate, short-form interaction.

- **App Marketing & Push Notifications (Owned):** Sending direct alerts to a user's home screen. Highly effective for retention, but requires the user to keep notifications enabled.
- **SMS & WhatsApp Marketing (Owned):** Text-message marketing. It boasts open rates as high as 98%, but requires extreme discipline so it doesn't cross the line into spam.
- **Location-Based Ads (Paid):** Triggering ads when a user enters a specific geographic boundary (geofencing)—e.g., serving a coupon when someone walks past a physical storefront.

6. Affiliate Marketing (Paid/Earned Blend)

Affiliate marketing is a performance-based channel where external creators, publishers, or bloggers promote your product and receive a commission for every sale they generate.

- **Mechanism:** Driven by unique tracking links. A tech blogger reviews a laptop, includes a custom link, and if a reader buys through that link, the blogger gets a percentage (e.g., 5-10%) of the sale.
- **Why it works:** It shifts the financial risk from the brand to the publisher. You only pay *after* a conversion is secured, making it a favourite for e-commerce growth.

Website Basics

1. The Core Importance of Websites for Marketing:

- **Total Ownership vs. Rented Space:** Your social media profiles are "rented space." If an algorithm changes, your reach can tank overnight. If a platform shuts down, you lose your audience. You own your website completely.
- **The Ultimate Conversion Hub:** Social media platforms are built to keep people scrolling on their app. Your website is built exclusively to turn a casual browser into a paying customer by removing distractions.
- **Credibility & Professionalism:** Consumers treat a business with its own domain name as a legitimate operation. A website acts as a 24/7 digital storefront that answers questions even when you are asleep.
- **Data Control & Analytics:** On your website, you can track exactly how long people stay, what pages they look at, and where they get confused. This data feeds your marketing funnel and behaviour analysis.

2. Main Types of Websites

1. Corporate / Business Websites

- **The Purpose:** To act as a digital brochure and credibility anchor for a company. Its primary job is to generate leads (inquiries, phone calls, form fills) rather than instant sales.
- **Key Features:** "About Us" pages, services offered, team bios, case studies, and a clear "Contact Us" form.
- **Example:** A marketing agency, a local plumbing business, or a corporate law firm site.

2. Main Types of Websites

2. E-Commerce Websites

- **The Purpose:** To sell physical or digital products directly online. The entire architecture is built around transactional handling.
- **Key Features:** Product catalogs, filtering systems (size, colour, price), a shopping cart, secure payment gateways, and user account portals.
- **Example:** Amazon, Nike.com, or a boutique online clothing store.

2. Main Types of Websites

3. Blogs / Content Publishers

- **The Purpose:** To display written articles, news, and media. These sites focus on driving high volumes of traffic, usually making money through ads, affiliate links, or sponsorships.
- **Key Features:** Category filters, search bars, comment sections, social sharing buttons, and heavy integration with email newsletter signups.
- **Example:** HuffPost, tech review blogs, or an artist's personal painting process blog.

3. The Digital Environment: UX, UI, and Mobile Responsiveness

● User Experience (UX) — The Logic and Flow

- **Clear Navigation:** Can a user find what they want in less than 3 clicks?
- **Fast Load Times:** If a website takes longer than 3 seconds to load, over half of mobile visitors will leave. Speed is a massive part of UX.
- **Logical Hierarchy:** Organising information so the most important elements (like your headline and primary button) catch the eye first.

● User Interface (UI) — The Visual Style

- **Visual Elements:** The colour palettes, fonts, images, button shapes, and spacing.
- **Brand Consistency:** Ensuring the site matches the company's fonts and colours exactly.
- **Accessibility:** Making sure there is enough contrast between the text and background colour so that everyone (including visually impaired users) can read it easily.

Mobile Responsiveness — The Adaptability

Over 50-60% of global web traffic comes from smartphones. Mobile responsiveness means your website **automatically resizes, reshapes, and adjusts its layout** based on the screen it's being viewed on.

- **Static vs. Responsive:** A non-responsive site opens on a phone looking exactly like a microscopic version of the desktop site, forcing the user to pinch and zoom to read anything. A responsive site stacks elements vertically, makes text larger, and changes large menus into a clean, tap-friendly hamburger menu
- **Thumb-Friendly Design:** Buttons on a mobile site need to be large enough to easily tap with a thumb without accidentally clicking the wrong link.

4. Website Architecture & Information Hierarchy

- **Site Mapping & Folder Depth:** Organising pages logically so users and search engine crawlers can reach any page on your site within 3 clicks from the homepage.
- **Navigation Models:** Implementing primary navigation bars, footer links, and breadcrumbs (e.g., Home > Services > Web Design) to guide user orientation.
- **Topic Clustering:** Grouping related content around a central "Pillar Page" to build topical authority for search engines.

5. Conversion Rate Optimisation (CRO) & On-Page Elements

- **High-Converting Call-to-Action (CTA) Design:** Strategic placement of primary CTAs ("Get Started") and secondary CTAs ("Learn More") using high-contrast visual hierarchy.
- **Lead Capture Systems:** Utilising pop-ups, embedded forms, slide-ins, and sticky headers to collect visitor contact details before they leave.
- **Trust Signals & Social Proof:** Integrating security badges (SSL/TLS certificates), client logos, real-time reviews, and testimonial cards near conversion points.

6. Website Technical Infrastructure & Security

- **Content Delivery Networks (CDNs):** Distributing website assets across global servers (like Cloud flare) to serve pages faster to users based on their location.
- **CMS Platforms (Content Management Systems):** Comparing custom-built sites against CMS tools (WordPress, Web flow, Shopify) for scalability, speed, and ease of content updates.
- **Security & Compliance:** Implementing SSL encryption (<https://>), regular data backups, malware protection, and GDPR/Cookie Consent banners for privacy compliance.

DIGITAL MARKETING

Website Basics

7. Core Web Vitals & Technical UX Metrics

- **Largest Contentful Paint (LCP):** Measures how long it takes for the main content of a webpage to load (ideal target: under 2.5 seconds).
- **Interaction to Next Paint (INP):** Measures website responsiveness and how quickly a page reacts to user clicks or button taps.
- **Cumulative Layout Shift (CLS):** Measures visual stability by ensuring page elements don't jump around unexpectedly while images load.

DIGITAL MARKETING

Website Basics

8. Web Analytics & User Behaviour Tracking

- **Event & Goal Tracking:** Setting up conversion events in tools like Google Analytics 4 (GA4) to track form submissions, button clicks, and sales.
- **Visual Behaviour Mapping:** Using heat maps and click maps (via tools like Hot jar or Microsoft Clarity) to see where users scroll, click, or get stuck.
- **Sales Funnel & Drop-Off Analytics:** Tracking step-by-step user paths to identify where visitors abandon cart or exit the lead generation process.

Web Analytics Basics

1. Introduction to Google Analytics 4 (GA4)

- **Industry Standard:** The primary tool used globally to track website traffic and user behaviour.
- **Modern Upgrade:** Replaced the older "Universal Analytics" (UA) system with completely new tracking logic.
- **Event-Based Tracking:** Processes every single interaction—page views, button clicks, video plays, and downloads—as an independent "Event."
- **Richer User Insights:** Shifts focus away from simple page counts to give a deeper look into actual user behaviour and engagement.

Event-Based Data Model in GA4

- **The Concept:** Why GA4 abandoned session-level pageview hierarchies in favor of raw event parameters.
- **4 Event Categories in GA4:**
 - **Automatically Collected Events:** `page_view`, `first_visit`, `session_start`.
 - **Enhanced Measurement:** Automatic tracking for scrolls, outbound clicks, site search, and video engagement.
 - **Recommended Events:** Standardized e-commerce and lead gen events (e.g., `purchase`, `generate_lead`).
 - **Custom Events:** Unique business actions configured manually via GTM.

2. Core Metrics: Sessions, Bounce Rate, and Goals

1. Sessions : A session is a single visit to your website, serving as a container for all the actions a user takes while there.

How it starts: The moment a user lands on your site.

How it ends: A session automatically closes after **30 minutes of inactivity**, or if the clock strikes midnight.

Example: If a user opens your site, looks at a page, walks away to eat lunch for 45 minutes, and then clicks another page, that counts as **two separate sessions**.

2. Core Metrics: Sessions, Bounce Rate, and Goals

2. Bounce Rate (The Modern Definition)

In the older version of Google Analytics, a "bounce" meant someone looked at one page and left without clicking anything else. GA4 completely flipped this concept on its head by introducing **Engaged Sessions**.

In GA4, a session is considered "engaged" if the user does **at least one** of the following:

- Stays on your website for **longer than 10 seconds**.
- Views 2 or more pages.
- Triggers a **conversion event** (like a click or form fill).

DIGITAL MARKETING

Web Analytics Basics

2. Core Metrics: Sessions, Bounce Rate, and Goals

3. Goals (Conversions in GA4)

In web analytics, you don't just want traffic; you want specific outcomes. What used to be called

"Goals" are now officially called **Conversions** in GA4.

- A conversion is any user action that is highly valuable to your business.
- **How it works:** You take a normal event (like a user reaching a Thank-You page after buying a product, or clicking a Submit button) and toggle a switch in GA4 that says "**Mark as conversion.**"
- GA4 will then track your **Conversion Rate**—the percentage of total sessions that successfully completed that specific goal.

DIGITAL MARKETING

Web Analytics Basics

3. Google Tag Manager (GTM) Basic

1.Tags (The "What"): The actual snippet of tracking code that sends data to a platform.

For example: "Send an event notice to Google Analytics 4."

2.Triggers (The "When"): The specific rule or condition that tells the tag when to activate. For example: "Fire this tag only when someone clicks the button that says 'Download E-book'."

3.Variables (The "Specific Information"): Dynamic placeholders that capture extra data points. A variable can grab the exact price of an item in a cart, the specific URL a user clicked, or your unique GA4 Measurement ID so you don't have to re-type it every time.

GTM Tag Deployment — Step-by-Step Workflow

- Step 1: Install GTM Container Code snippet in the website <head> and <body> tags.
- Step 2: Configure the GA4 Configuration Tag with your unique Measurement ID.
- Step 3: Create Event Tags linked to specific user interactions (e.g., Form Submission, CTA Click).
- Step 4: Test using GTM Preview Mode before publishing to live traffic.

Micro vs. Macro Conversions in Analytics

- **Macro Conversions:** Primary revenue-generating outcomes (e.g., Completed Purchase, Paid Subscription).
- **Micro Conversions:** Secondary indicators of intent (e.g., Downloading an E-book, Adding to Cart, Watching 50% of a video).
- **Strategic Value:** Tracking micro conversions helps identify where drop-offs occur before the final macro conversion.

Digital Marketing Strategy Planning

DIGITAL MARKETING

Digital Marketing Strategy Planning

Introduction to Digital Strategy Planning

- **From Goals to Execution:** How to turn high-level SMART business targets into tactical media campaigns.
- **Reverse-Engineering Traffic Numbers:** Calculating the exact volume of visitors needed to hit a revenue goal.
 - **Example Calculation:** If your goal is 500 sales and your site CVR is 2%, you need 25,000 unique visitors.

Phase 1: Translating the SMART Goal into a Media Plan

Once the numbers are reverse-engineered (like the calculation requiring 25,000 unique visitors to drive 500 sales), the strategy must be mapped across channels using a **Media Plan**. You distribute the traffic load based on channel conversion strengths:

- **Intent-Driven Channels (60% of traffic allocation):** Directing budget to Google Search Ads (SEM) and SEO. Because users are actively searching for the solution, these channels historically yield the highest conversion rates (~3-5%), requiring fewer total clicks to hit your sales numbers.
- **Discovery-Driven Channels (40% of traffic allocation):** Directing budget to Paid Social (Instagram/TikTok). These channels have a lower direct conversion rate (~1-2%) but are essential for generating top-of-funnel awareness and fueling your remarketing lists.

DIGITAL MARKETING

Digital Marketing Strategy Planning

Phase 2: From Buyer Personal to Creative Execution

A personal profile is useless if it stays locked in a strategy document. Marketers use the documented **Pain Points** and **Barriers to Purchase** to build a **Creative Brief** for copywriters and designers.

The Ad Copy Framework (Addressing the Personal)

- **The Hook (Pain Point):** "Losing 10 hours a week to manual invoicing?"
- **The Solution (Desired Outcome):** "Automate your billing workflows in under 5 minutes and get your weekends back."
- **The Objection Destroyer (Barrier to Purchase):** "Try it completely free for 14 days. No credit card required, zero complex coding setup."

DIGITAL MARKETING

Digital Marketing Strategy Planning

Phase 3: Setting Up the Measurement Architecture

Before a single dollar is spent on your planned budget, the **KPI Tracking Architecture** must be physically deployed on the backend to avoid flying blind.

1. Deploy Tracking Code: Google Tag Manager is deployed to track clicks on your call-to-action buttons (e.g., Submit Form).

2. Define Conversions: These behavioural triggers are sent directly to GA4 as events and marked as **Key Events** to track your exact conversion rates.

3. Establish a Live Dashboard: Marketers link GA4 to a reporting tool (like Google Looker Studio) to build a dashboard comparing daily ad spend against real-time revenue. This allows you to monitor your **Return on Ad Spend (ROAS)** daily and adjust budgets instantly before wasting money. .
